Infrastructure as a public good= social shared capital managed by local companies

Electricity, which is essential for people's lives, is produced locally using renewable energy sources (local production), and the infrastructure that supplies it is operated by local companies (localconsumption).

Achieve circulation within the local economy (i.e., electricity and money circulating locally) and contribute to resilience during disasters through an independent and dispersed power provisioning system that is a platform for sustaining urban development.

Playing a role in regional revitalization

=

Regional Development

Contributing to the environment, global warming countermeasures, CO₂ reductions (decarbonization)

The funds will be used

revitalization activities of partner companies

and organizations.

for the local

Create a mechanism that will revitalize the region by circulating electricity charges within the region.
